BUILDING A BETTER TOMORROW

COMPANY BIO 2025

EXECUTIVE SUMMARY

NORMALIZING MODERN METHODS OF CONSTRUCTION

Moderne Development is a next-generation real estate and construction technology company redefining how the world builds through automation, robotics, and modern methods of construction (MMC). We are actively collaborating with Barratt Developments, the UK's largest homebuilder, to integrate 3D Concrete Printing (3DCP) into residential construction workflows—marking a milestone in Europe's transition toward digitally enabled housing solutions.

Born from a multidisciplinary collective of technologists, engineers, architects, and designers, Moderne is setting a new global standard in construction automation. Our platform unites real estate development with proprietary construction innovation, leveraging advanced robotics, digital project management systems, and integrated 5D BIM workflows.

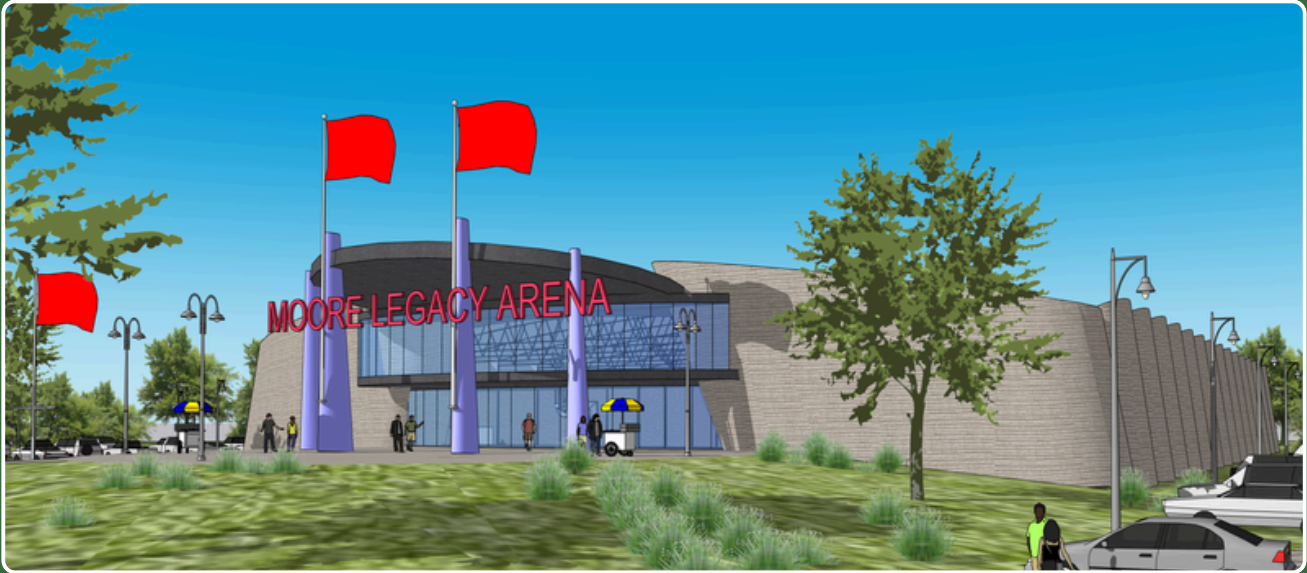

Our technology portfolio includes:

- 3D Concrete Printing (3DCP)
- Prefabrication and tunnel-form construction
- Robotic parking infrastructure
- Structural Concrete Insulated Panels (SCIP)
- Prefab concrete for mid-to-large scale commercial projects

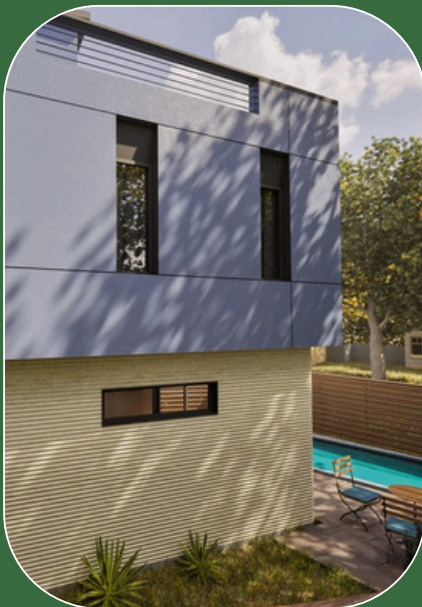

By integrating these technologies into our development projects, we drive down costs, reduce timelines, and deliver higher-quality builds at scale. Our mission is to revolutionize construction through intelligent automation, forging a path toward more sustainable, affordable, and resilient infrastructure across North America, the UK, and the Middle East.

MODERN METHODS OF CONSTRUCTION

Our goal is to collaborate with developers, contractors, and forward-thinking leaders in the real estate industry to accelerate the adoption of modern methods of construction (MMC) and digital workflows. Proven case studies from Europe and Asia demonstrate significant cost reductions through the use of robotics, just-in-time delivery systems, prefabrication, and automated logistics for material handling. These efficiencies are further amplified by advanced 5D BIM integration and digitally connected project management platforms. As outlined in multiple McKinsey reports, implementing these innovations in the U.S. has the potential to unlock similarly transformative savings.

Our team brings hands-on experience in construction robotics, drone-based surveying, and spatial automation, complemented by an advisory board with deep expertise in concrete systems, aerospace engineering, material science, and structural design. Together, we are uniquely positioned to integrate emerging technologies into scalable, field-tested construction systems that meet the demands of today's built environment.

OUR TEAM

EDGAR MUNOZ - CEO

A visionary technologist, inventor, and executive with over a decade of experience. He is the inventor of multiple unmanned aerial systems patents pending and a recognized contributor to ANSI and the Data Processing UAS committee. Edgar has managed sales, marketing, and government relations teams and worked with major organizations around the globe

ALESSANDRO LANNES - COO

Alessandro has assisted dozens of companies in optimizing and automating their marketing, sales, and operations processes to increase efficiencies. Most notably, Alessandro helped an ecommerce B2C business grow their annual revenue from \$20M to \$100M in just 18 months.

PAUL CEJAS - TECHNICAL DIRECTOR

Former Chief Engineer at Boeing Defense Systems, led award-winning teams in engineering innovation and advanced technology application, including the development of the QF-16 target drone and MQ-28 Ghost Bat unmanned wingman. With expertise as a Lean Manufacturing advisor and Internal Auditor, he has a proven track record of improving operational processes. Since taking early retirement from Boeing, Paul has been consulting for startups developing disruptive technologies, focusing primarily on green technologies in energy, recycling, and construction, helping them transition from prototypes to production.

OUR TEAM

ROBERT MECHIElsen - INNOVATION DIRECTOR

A building innovator who combines software and concrete to create innovative and sustainable solutions for the construction industry. He has over 30 years of experience in designing and building carbon-neutral, modular, and smart homes, apartments, and high-rises around the world. He is the founder of VERTIKAAL, a software platform that automates the design process and generates 5D BIM data for cost estimation and scheduling. He is also the executive creative director of Studio RMA, a design-build firm that specializes in SCIP (Structural Concrete Insulated Panels) technology. He designed the Hi'ilani EcoHouse, the first concrete-built carbon-neutral home in the USA.

DANIEL WHITE - SALES DIRECTOR

A sales professional with over 20 years of experience across a diverse range of industries, including medical devices, manufacturing, and distribution. As a seasoned sales leader, he has managed teams of up to 45 sales reps with diverse backgrounds, fostering a positive and productive culture that enabled the team to exceed their goals.

OUR TEAM

JAMES GUIANG - BOARD OF DIRECTORS

A geophysicist with more than 40 years of experience in the oil industry starting with Exxon, Amerada Hess and Conoco. During the past 25 years Jim has been an investment manager and financier specializing in emerging markets in the international oil & gas industry. More recently (2006-12), Jim was Managing Director-Natural Resources at Millennium Global Investments Ltd. in charge of the MG Natural Resources Fund, and advisor to the MG High Yield and MG Africa Opportunities Funds..

PAUL GROEPLER - INVESTOR/BOARD OF DIRECTORS

Paul F. Groepler is an accomplished investor and entrepreneur with over 30 years of experience in both large corporations and startups. He has worked with Fortune 500 companies such as Motorola, Sun Microsystems, Daimler-Benz, DELL, and IBM. Mr. Groepler has co-founded seven successful ventures, including Technology Works, Aeon Technology, and Leapfrog Wireless, and has played a role in the IPOs of Sun Microsystems and Dell. He also has extensive experience as a Swiss fund manager and has consulted for prestigious organizations like the United Nations and Max Planck Institute. Holding a B.S. in Computing Science and Electrical Engineering from Texas A&M, he also pursued a Master's in Data Science and Economics from MIT.
